Structured Clinical Interview for DSM-5 Disorders (SCID-5-CV), Clinician Version
Michael B. First, M.D., Janet B. W. Williams, Ph.D., Rhonda S. Karg, Ph.D., and Robert L. Spitzer, M.D.

The **Structured Clinical Interview for DSM-5, Clinician Version** (SCID-5-CV) is a semistructured interview guide for making DSM-5 diagnoses. It is administered by a clinician or trained mental health professional who is familiar with DSM-5 classification and diagnostic criteria. The SCID-5-CV is available in sets of five one-time-use booklets.

The SCID-5-CV can be used:

- To ensure that all of the major DSM-5 diagnoses are systematically evaluated in adults.
- To characterize a study population in terms of current psychiatric diagnoses. For example, diagnostic data that are obtained using the SCID interview can be used by researchers, practitioners, policy makers, and the general public who are interested in prevalence and incidence estimates of psychiatric disorders among certain populations (e.g., depression in patients with diabetes).
- To improve interviewing skills of students in the mental health professions, including psychiatry, psychology, psychiatric social work, and psychiatric nursing. For example, the SCID can provide trainees with a repertoire of useful questions to elicit information from a patient as the basis for making diagnostic judgments.

A unique and valuable tool, the SCID-5-CV is used to assess and record DSM-5 diagnostic decisions. It will guide the clinician step-by-step through diagnostic decisions using the DSM-5 criteria, which are included in abridged format.

The American Journal of Psychiatry

Editor: Robert Freedman, M.D.

The American Journal of Psychiatry is the most widely read psychiatric journal in the world. Published monthly, it is an indispensable journal for all psychiatrists and other mental health professionals who need to stay on the cutting edge of every aspect of psychiatry. Reviews and overviews help with information to prepare for recertification and original research provides information on the latest advances in diagnosis, treatment, neuroscience, and patient populations.

Highlights:
- The American Journal of Psychiatry’s latest Impact Factor is 13.559 placing it in the top 1% of all scientific, medical, and technical journals indexed by Thomson Scientific.
- The American Journal of Psychiatry (AJP) is again among the top 1% in terms of immediacy according to Thomson Scientific’s Immediacy Index. This important performance metric is calculated by dividing the number of citations to articles published in a given year by the number of articles published in that year. The Immediacy Index is a good measure of how quickly a given journal’s articles are cited.
- A recent poll conducted by the BioMedical & Life Sciences Division of The Special Libraries Association identified the 100 most influential journals in all of Biology & Medicine over the last 100 years. The American Journal of Psychiatry was among those honored, the only psychiatry/psychology journal represented.

Features:
- **AJP in Advance**—As part of the Journal’s commitment to bringing the latest research to the field faster, all research articles now appear online in advance of their appearance in a print issue. AJP in Advance is updated with new articles on the 1st and 15th of each month (or the next business day).
- **Treatment in Psychiatry Series**—Leading experts provide a hypothetical case vignette on commonly encountered issues in patient care followed by a summary of the relevant research literature, plus offers recommendations of how to proceed with assessment and treatment.
- **Clinical Case Conference Series**—Complements the Treatment in Psychiatry series by giving additional practice oriented guidance by presenting actual patients (with disguised identities) who pose especially difficult or unique problems in diagnosis and treatment.
- **AJP Audio**—Each online issue includes a 30-minute downloadable MP3 format program that contains highlights and selected findings from the issue.
- **Residents Journal**—Each online issue is also accompanied by a FREE electronic publication produced specifically for psychiatry residents that features instructive cases, perspectives on training and career development, and discussions of unique clinical or educational programs along with special instructional columns from AJP Editors.

No other psychiatric journal reaches more psychiatrists with greater impact or immediacy than The American Journal of Psychiatry, the journal that the overwhelming majority of psychiatrists consider essential. Each issue covers topics on:
- Disorders—substance abuse, childhood psychopathology, mood disorders, and personality disorders
- Treatment—psychopharmacology, psychotherapy, and ECT
- Neuroscience—brain imaging, genetics, and molecular biology

Helping Kids in Crisis
Managing Psychiatric Emergencies in Children and Adolescents
Edited by Fadi Haddad, M.D., and Ruth S. Gerson, M.D.

This book provides clinical case examples with concrete tools for assessment, de-escalation, and diagnosis, to help clinicians quickly stabilize the crisis and determine when a trip to the emergency room is necessary.

Preventive Medical Care in Psychiatry
A Practical Guide for Clinicians
Edited by Robert M. McCarron, D.O., Glen Xiong, M.D., Craig R Keenan, M.D., and Henry A. Nasrallah, M.D.

The book is designed to assist psychiatrists and other mental health providers in making the shift from treating mental disorders to treating the holistic needs of people with mental disorders. Individuals with chronic mental illness typically have higher rates of adverse health risk behaviors, such as smoking, poor diet, and lack of physical activity, which puts them at high risk for the development of obesity, type 2 diabetes, and cardiovascular disease. Additionally, these individuals frequently lack a primary care physician. By focusing on the knowledge and skills mental health providers need to prevent and detect common medical conditions in their patients, the book enables them to develop models of care that are integrated within individuals and across populations.

FOCUS Posttraumatic Stress Disorder Maintenance of Certification (MOC) Workbook
Edited by Deborah J. Hales, M.D., Mark Hyman Rapaport, M.D., and Ann Thomas

The workbook is a collection of practical and evidence-based materials to help psychiatrists develop and maintain a sound, up-to-date foundation of medical knowledge and clinical expertise, ultimately improving patient care. Designed to be a “one stop” resource to meet MOC requirements, the book aims to help psychiatrists evaluate their knowledge and clinical practice; initiate a program of quality improvement; and advance their assessment, communication, diagnostic, and treatment skills.

The workbook is a single source for the busy practitioner to meet the American Board of Psychiatry and Neurology (ABPN) MOC requirements. Approved by the ABPN, this workbook provides the necessary tools to meet Part 2 (Self-Assessment and CME) and Part 4 (Performance in Practice) for patients with a diagnosis of posttraumatic stress disorder.

The APA is accredited by ACCME to provide continuing medical education for physicians. The APA designates this enduring material for AMA PRA Category 1 Credits™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

Clinical Guide to Depression and Bipolar Disorder
Findings From the Collaborative Depression Study
Martin B. Keller, M.D., Editor-in-Chief
William H. Coryell, M.D., Jean Endicott, Ph.D.,
Jack D. Maser, Ph.D., and
Pamela J. Schettler, Ph.D., Co-Editors
This book builds on research from the vastly influential NIMH Collaborative Depression Study (CDS) to provide clinicians with information they can use to assess, diagnose, treat, and understand how their patients will likely fare over the course of their illness. The book highlights the significance of CDS findings on mood disorders, including major depressive disorder and bipolar disorder, with emphasis on clinical course, interventions, and outcomes. Chapters on genetic factors and comorbidities provide critical context, and chapter-ending summaries of clinical implications help to highlight the importance of the CDS findings for clinical practice.

#### Fatal Pauses

**Getting Unstuck Through the Power of No and the Power of Go**

Stuart C. Yudofsky, M.D.

*Fatal Pauses* is a fresh and fascinating take on what it means to be “stuck” and how to get “unstuck.” Part textbook for mental health professionals and part self-help manual for people who, for a multitude of reasons, find themselves stuck in dysfunctional or unsatisfying relationships, jobs, behavioral patterns, dependencies, and even psychotherapy, this book guides readers through the various manifestations of this condition by presenting and analyzing the case studies of patients in intensive and entertaining detail. It is designed to highlight the richness and uniqueness of human experience, therapeutic promise and poetry, even as it reveals the challenges and frustrations of the dysfunctional behavioral patterns that so many of us share.
